I am used to use adobe acrobat pro 10 and the same program was not working for me i installed acrobat 11 (portable) Acrobat Pro XI (Portable), acrobat reader 11.1.0.25_1014 Unfortunately the most of videos are not supported for Acrobat reader 11.1.0.25_1014, I am facing the following problem What is the proper version of Acrobat Reader or Acrobat Pro XI (Portable) to open my pdf files or I need to go through the setting/configuration of the pdf file to make it compatible with Acrobat Reader or Acrobat Pro XI (Portable) A: The PDF spec itself is really badly designed. There are a number of problems that have been fixed in recent PDF versions but that's an old and widespread problem. PDFs are fundamentally designed to be read (not that I'm necessarily a fan of that), not edited. As far as the specs are concerned, Acrobat X and XI are not "old". They were released around the year 2000, some time after the PDF 1.5 spec was issued. PDF 1.7 was released around 2009. I can't recommend using older versions of Acrobat. Your options are: Upgrade to the latest version of Adobe Acrobat, which can be purchased for both Windows and Mac. Use another PDF software on either Windows or Mac, e.g. Foxit Reader (if you're on Windows) or Preview (if you're on Mac). Make use of the fact that PDFs have a character encoding, and make your edits to the PDF in a non-destructive way. When you need to use the changes, it's often a fairly painless process (though it may take a bit of work to get used to). If you are comfortable with using text editors, there are a number of things you can try: You can use a text editor and make your changes directly to the raw PDF file, i.e. not using Acrobat. If you want to avoid using an editor, then make a copy of the PDF (or export the original and make a new copy). Your most likely options for this are: Sublime Text. Not exactly free, but great for writing text in a non-destructive way. 82157476af
